heha MOVERS

New beginnings.
Better moves.

A clearer way to find, compare and coordinate independent moving companies in Kenya.

Fullstack Jac | Explainable graph agents | Human decisions

THE PROBLEM

A new chapter shouldn’t start with moving-day uncertainty.

01 · CUSTOMERS

Hard to compare

Scattered recommendations, unclear inclusions and little confidence about which crew fits a move.

02 · MOVERS

Hard to be discovered

Independent teams need a consistent way to find relevant jobs and communicate their scope.

03 · COORDINATION

Too many loose ends

Inventory, access, quotes and arrival details are easily lost across disconnected conversations.

THE MARKETPLACE

One request.
The right crew. A shared plan.

Describe your move → Compare firm quotes → Choose your mover → Coordinate & complete → Review the experience

For customers

Explainable shortlists, preparation checklist, quote choice, private booking messages and a visible job history.

For moving companies

Verified partner profiles, relevant leads, scope-aware quotations and a workspace for fulfilling accepted jobs.

MEANINGFUL JAC USE

Graph agents that explain what they recommend.

MatchAgent

```
MoveNeed
  → EligibleRoute
    → MoverCandidate

Filter → score → explain → shortlist
```

Verification, capacity, packing, local area, reputation and indicative budget fit.

MovePlanner

```
PlanningContext
  → NeedsEvaluation
    → PlanningRule

Observe → evaluate → plan → clarify
```

17 explicit rules turn inventory/access evidence into preparation tasks and questions for the mover.

Deterministic Jac walkers. No LLM key, invented distance or autonomous booking/payment. The customer approves the quote.

WORKING PRODUCT

A complete marketplace loop, tested through the browser.

CUSTOMER	Request → saved checklist → quote acceptance → review
MOVER	Quote → private messages → pickup → delivery
ADMIN	Partner verification, revocation and booking oversight
TRUST	Server permissions, unique acceptance/payment/review, audit history

Watch the included actual browser walkthrough: **docs/heha-demo.mp4**

Sample businesses and public demo accounts. The 30% deposit is simulated; no money is charged.

TECHNICAL EXECUTION

Built for a reliable demonstration. Clear about the boundary.

8

Jac domain tests

Lifecycle, authorization, isolation, matching, planning, private messages, checklists and verification.

E2E

Real browser checks

Customer, mover, admin, persistence after reload, mobile overflow and runtime errors.

80%+

Jac source audit

Authored source-byte measurement includes tests, QA, CSS and Makefile; method and file report are included.

SQLite transactions persist business records; typed request-scoped Jac graphs drive recommendations. Current-instance checks do not imply a hosted deployment or organiser eligibility certification.

PATH TO IMPACT

Start with household moves. Grow with trustworthy operations.

Proposed business model

Explore a disclosed fee on completed marketplace bookings, with optional mover tools after validating demand. Pricing and settlement are future business decisions.

Initial discovery

Interview households, student movers and independent moving teams; pilot in one city before expanding.

Before a live launch

- Real company and insurance verification
- M-Pesa reconciliation and settlement
- Abuse controls and stronger account recovery
- Reviewed privacy, cancellation and dispute processes
- Measured service quality and availability

A fresh start, *in good hands.*

A Kenyan marketplace built with Jac, combining explainable planning with human choice.

Try the demo. Inspect the graph agents.
Help shape a trustworthy moving marketplace.
